Southdown's Knoxville Cement

According to Stan Morell, Quarry Supervisor at Southdown's Knoxville Cement Plant, after only six months of using Jack Wrap It as their abrasion protection, they have seen significant savings. One piece of equipment, the 992 CAT loader, requires a transmission hose replacement every three months at a cost of \$1000. To date, they have bypassed two replacements and their problem areas show no wear. "This is typical of what we are seeing on all of our equipment using Jack Wrap It." Morrell said, "Downtime is critical to our operation and anything that will reduce that will play a major role in our preventative maintenance program."

Major Equipment Rental company completes 3 year test of abrasion protection wrap

After three years of testing Jack Wrap It at two of their rental branches in the South Central Region, a major equipment rental company's officials sanctioned the use for all branches. The test started with the wrapping of two hoses of a small breaker attached to a Bobcat. These hoses, under normal rental use, are replaced three times per year at an average cost of \$900 per year. This cost includes hose, service calls and fittings. After three years with the use of Jack Wrap It, no hoses have been replaced. This has saved the company at least \$2700 on this one piece of equipment.

CABLE HOSE ABRASION PROTECTION WRAP

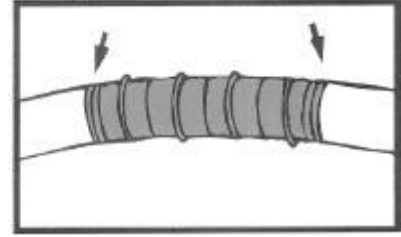

Fast and reliable method for permanently repairing and splicing damaged mining cables, conduit repair, phase splice, jacket repair-- voltage rated up to 8 KV when using HV linerless tape. This product is assigned MSHA number P-208-3-IC-149/1-MSHA. This product is accepted for use as outer jacket abrasion covers for hose when properly installed. This product is not accepted for use on hoses with corroded or physically damaged braid.

Use abrasive strip to rid hose or cable of loose dirt, grime, and grease in the application area

Start 1" from end of application area. Peel paper backing off as you stretch and wrap in half laps. If using ridged wrap, ridge should slant in the direction you are wrapping.

TROUBLE SHOOTING TIPS FOR HYDRAULIC HOSE

LOOK FOR ABRASIONS

FOR USE IN METAL AND NONMETAL MINES

This product is assigned MSHA number P-208-3-IC-149/1-MSHA and may be referred to as accepted for underground mines when used in accordance with the manufacturer's health and safety instruction. This product is accepted for use as outer jacket abrasion covers for hose when properly installed. This product is NOT accepted for use on hoses with corroded or physically damaged braid.

Primary sources of hydraulic equipment failure are:

1. Abrasions from cuts
2. Friction caused by other moving hoses
3. Objects in the operating environment

In developing a comprehensive preventive maintenance seminar for hydraulic hoses, Gates Rubber identified the primary cause of hydraulic equipment failure.
