

Best® Butyl & Butyl II

Best Manufacturing Company

579 Edison Street

P.O. Box 8

Menlo, GA 30731-0008

The gold standard of ketone and gas permeation-resistant hand protection is butyl rubber. Yet butyl rubber gloves vary widely in quality and protection. That's why the Best® Butyl and Butyl II remain the gold standard when it comes to butyl rubber gloves. And that's not simply a matter of marketing hyperbole but a major factor for biohazard personnel and military chemical weapons experts choosing proper butyl rubber hand protection. Available in a maximum gauge, heavy-duty style 30-mil (1/1000 of an inch) thick or a lighter weight 14-mil version, consider Best® Butyl or Butyl II when only the Best® will do.
