

C28 Legionella Kit

Manage the risk of Legionnaires Disease

Given the right conditions, Legionella bacteria can grow in any workplace. If you manage any of the water systems described in the Health and Safety Commission's L8 Regulations, part of your risk assessment will include a temperature monitoring regime to ensure any out of range temperatures are immediately rectified.

If you have responsibility for management of water systems at your facility, a Comark Instruments Legionella Kit will make that job easier.

The C28 Legionella Kit is ideal for testing water towers and water systems in businesses, schools, dental practices, residential homes and other institutions where there could be high risk areas.

The kit contains a C28 Thermometer, which is supplied with a UKAS Certificate of Calibration. There are three robust probes to provide options for air, penetration and surface of temperature measurement.

Use the probe wipes supplied to wipe the probe shaft between measurements to avoid the risk of cross-contamination.

C28 Legionella Kit

- 1 x C28 Thermometer with sub-miniature connector
- 1 x UKAS Certificate at 0°, +70°C and +100°C
(PRO1 Penetration Probe only)
- 1 x PRO1 Penetration Probe
- 1 x SK21M Surface Probe
