

METAL MESH – CUT-RESISTANT GLOVES

- Whiting + Davis and Chainex metal mesh products are constructed of individually welded and joined stainless steel rings
- The individually welded rings allow the mesh fabric to flow without harsh edges; gloves are comfortable and easy to wear
- Gloves have seams that are 4-ring joined, sealing the seam so as not to have gaps that would allow knife points to poke through
- Thumbs are attached with a 3-ring join for a strong seam at a high wear area
- Gloves are ergonomically designed and constructed with tapered fingers and palm to prevent mesh from sagging, minimizing the hazard of getting gloves caught in machinery
- Gloves are 3-Step reversible to be worn on either hand
- All mesh is manufactured following the European Standard of EN1082
- Chainex items are CE certified and tested
- Mesh items are sold by the each
