

Product
USM-2954

For Food Safety and Worker Safety

Like all US Mesh garments, the USM-2954 is made from 316L surgical grade stainless steel and delivers the ultimate in safety – higher cut protection than a knit can provide, plus puncture resistance. That's because a knife point can only penetrate as far as the fractional openings in the mesh. And that's tough, considering individually welded rings are woven under and over adjoining rings, with 4 rings passing through each single ring. The USM-2954 apron is 20" wide by 12" long, with a waist strap that adjusts from 20" to 33". Stainless steel will not harbor bacteria, is non-corrosive and appropriate for wet environments. 21 CFR compliant for direct food contact.
